

INFRASTRUCTURE SURVEY

Surveying infrastructure can be extremely costly, with the need to shut down operations in order to get people into hard-to-reach areas. For example having inspectors climb electricity pylons requires part of the network to be shut as well as the time and risk involved in having someone in a dangerous location.

At Skyhook we aim to make your life easier. By using state-of-the-art Unmanned Aerial Vehicles (UAVs) we are able to get the sensors where they are needed, without unnecessary risk and cost.

All video and still imagery can either be transferred to you as raw imagery or at Skyhook we can edit the imagery for you.

Working closely with you, Skyhook's infrastructure survey capability ensures you benefit from new technologies to reduce your cost, time and risk whilst getting all the data you need to make your job a success.

Contact us today to discuss your requirements and we will provide a free no-obligation quotation.

With over 15 years' worth of expertise in UAV, filming and photography operations, Skyhook is CAA authorised with Permission For Aerial Work (PFAW) and experienced in flying in congested areas close to buildings and infrastructure.

Our UAV platforms carry the latest in imaging technologies to ensure you receive the data you need when you need it. Through the use of live video downlinks you are able to work alongside the UAV operator to pinpoint the areas you want to see as the UAV flies.
